PH

Potential of Hydrogen

Higher pH water (alkaline water) is believed to help neutralize excess acidity in the body, potentially reducing acid reflux, improving hydration, and supporting overall metabolic balance by maintaining optimal pH levels in the bloodstream.

ORP

Oxidation reduction potential measures a substance's tendency to gain or lose electrons, indicating its oxidizing capabilities.

When we drink ionized water negatively charged (ORP), the oxidation is delayed, and the cells of our body are allowed to regenerate.

HYDROGEN

Hydrogen is vital for our bodies as a fundamental component lof water, essential for hydration nutrient transport and waste removal and also plays a role in energy production and as a powerful antioxidant.
